PROJECTS

Number Guessing Game

- Created an interactive number guessing game where the computer selects a random number and the user attempts to guess it.
- Incorporated Python's random number generation and conditional statements to provide feedback on guesses.
- Developed a script that engages users with hints and keeps track of the number of attempts.

Simple Password Generator

- Developed a password generator that creates random passwords with specified length and character sets.
- Used Python's random number generation and string manipulation techniques to ensure password security.
- Provided a command-line tool for generating secure, random passwords.

EDUCATION

2023 - Present	Bachelor's Degree, **NBKR Institute of Science and Technology**
2022	Class 12th, **Board of Intermediate Education AP**, **906/1000**
2020	Class 10th, **Board of Secondary Education AP**, **575/600**

PUBLICATIONS

"Data Science Methodology: A Practical Guide"
LinkedIn, July 2024
- Authored an in-depth article that explores the key stages of the data science methodology, from data collection to model deployment.
- Provided practical insights and guidance tailored for beginners and intermediate learners, with a focus on real-world applications.
- The article received positive engagement from the LinkedIn community, highlighting its value as a resource for those starting their journey in data science.

SKILLS

Programming Languages	Python (Proficient), C (Basic)
Libraries/Frameworks	NumPy
Tools/Technologies	Git, Jupyter Notebooks, VS Code
Soft Skills	Problem Solving, Team Collaboration, Continuous Learning
